

Auto Thermostatic

ADDENDUM LEAFLET

(Please read this in conjunction with the main Auto Thermostatic Shower Handbook)

IMPORTANT

This leaflet should be given to the customer
After installation and demonstration.

*This model Auto Thermostatic has extra features added.
The following changes apply to the main handbook*

Temperature Lock Operation (Page 4)

This mode is **selected on installation** to prevent the temperature being set too hot or too cold. See relevant section on page 10.

All the controls are the same as previously described.

However, the **warmer and cooler** adjustment is **locked** to the digit range **2 to 5** and the temperature lock light will come on. The normal setting is now number 5.

Automatic switch off (new section Page 4)

With temperature lock selected, the shower will automatically switch off after 30 minutes. Near the end of the 30 minutes the shower will bleep several times and the display will change to “t”. In order to stop the shower automatically switching off, press either the warmer or cooler button.
